

The background is a dark blue gradient. It features a large, semi-transparent wireframe globe in the center-right. Overlaid on and around the globe is a complex network of thin, light blue lines connecting various points, resembling a graph or a neural network. Small, glowing green and blue dots are scattered throughout the scene, particularly concentrated around the globe and the network lines.

Assignment

Graph Theory

1. Can a simple graph have 5 vertices and 12 edges? If so, draw it; if not, explain why it is not possible to have such a graph.
2. Consider the graph given below :

a) What is the length of shortest path from A to I ? For which edges 'e' shortening 'e' by 0.1 will change s? For which edges 'e' will making e longer by 0.1 change s?

3. Find the weight of minimum spanning tree

4. Consider the following graph:

- i. What is the maximum flow? Compute actual flow as well.

4. Are the following graphs isomorphic:

5. Let G be a graph such that every vertex has degree 4 and the number of edges is 12. How many vertices does G have ?

6. Draw the tree whose Prüfer code is $(1, 1, 1, 1, 6, 5)$

7. Draw in the edges of the 8-vertex tree with the Prüfer code 112050.
8. Let G be a graph such that every vertex has degree 4 and the number of edges is 12. How many vertices does G have ?
9. Draw the tree whose Prüfer code is $(1, 1, 1, 1, 6, 5)$

10. Consider the following graph :

Perform a depth-first search on the following graph starting at A. Label every edge in the graph with T if it's a tree edge, B if it's a back edge, F if it's a forward edge, and C if it's a cross edge.

Which of the following is true for B, F and C?

NOTE: Whenever faced with a decision of which node to pick from a set of nodes, pick the node whose label occurs earliest in the alphabet.
