

- a) Date and Time of examination: 04/04/2022 ; 9:00 AM
- b) Examination Roll number : 21234747057
- c) Name of the Program : M.Sc. Computer Science
- d) Semester / Year : I / 1st year
- e) Unique Paper code (UPC) : 223411102
- f) Title of the Paper : Artificial Intelligence

Answer 4: (a) Various levels of Natural language processing are —

→ Level 1. Phonetics + Phonology —

It identifies and interprets the sound that makeup words when the machine has to understand the spoken language.

A set of closely related speech sounds (phones) is regarded as a single sound.

example :- the sound of "r" in red, bearing or round is a phoneme.

→ Level 2 - Morphology, lexicon —

Morphology is how the words are formed from smaller units called morphemes. It converts words into smaller units ending word radical, affix, topic and theme vowel.

example :- foxes : fox + es morphological parsing.

foxes stems to fox

→ Level 3 - Syntax, Parsing

It concerns with how words are group together in larger chunks, namely phrases and sentences.

It analyzes formation of sentences and specification of structures allowed in language.

example — The cat sat on the mat // Valid

On the the sat cat mat // Invalid

(3)

DATE: / /
PAGE:→ Level 4 - Semantics

Semantic analysis concerns the meaning of individual words.

example - watch (I, terrapin)

It can be "I watched the terrapin"
or "The terrapin was watched by me".

→ Level 5 - Pragmatics

It concerns how sentences are used in different situations and how use affects the interpretation of the sentence.

example - Could you turn in your exam now
(command)

Could you finish the exam? (question,
command)

→ Level 6 - Discourse

It concerns how sentences are group together in larger units of communication. It is used for multi-sentence processing.

example - I saw the ostrich with a telescope.
He stole it from the nearby store.

$$b) U^0 W = \{P(a, x, f(g(y))), P(z, f(z), f(u))\}$$

$$K=0 \quad W_0 = W, \quad \sigma_0 = \varepsilon$$

Disagreement set, $D_0 = \{a, z\}$

$$\sigma_1 = \sigma_0 \{a/z\} = \{a/z\}$$

$$W_1 = W_0 \{a/z\}$$

$$= \{P(a, x, f(g(y))), P(a, f(a), f(u))\}$$

$$K=1 \quad D_1 = \{x, f(a)\}$$

$$\sigma_2 = \sigma_1 \{f(a)/x\}$$

$$= \{a/z, f(a)/x\}$$

$$W_2 = W_1 \{f(a)/x\}$$

$$= \{P(a, f(a), f(g(y))), P(a, f(a), f(u))\}$$

$$K=2 \quad D_2 = \{g(y), u\}$$

$$\sigma_3 = \sigma_2 \{g(y)/u\}$$

$$W_3 = W_2 \{g(y)/u\}$$

$$= \{P(a, f(a), f(g(y)))\} \text{ singleton set.}$$

$$K=3 \quad W_3 \text{ is singleton}$$

Hence, m.g.u (most general unifier)
is $\{a/z, f(a)/x, g(y)/u\}$

$$ii) W = \{ \text{knows}(\text{Mother}(y), y), \text{knows}(\text{Father}(x), x) \}$$

Disagreement set

$$= \{ \text{Mother}(y), \text{Father}(x) \}$$

Unification is not possible as Mother & Father are different functions.

Hence the given set is not unifiable.

(*) Exterior angle A is denoted by $\text{EXT}\angle A$

Predicates :

- (1) $\text{Equal}(\text{sum}(\angle A, \angle B, \angle C), 180)$
- (2) $\text{Equal}(\text{sum}(\angle A, \text{EXT}(\angle A)), 180)$

Rules :

- (3) $\text{Equal}(x, y), \text{Equal}(z, y) \rightarrow \text{Equal}(x, z)$
- (4) $\text{Equal}(\text{sum}(x, y), \text{sum}(x, z)) \rightarrow \text{Equal}(y, z)$
- (5) $\text{Equal}(y, z) \rightarrow \text{Equal}(z, y)$

To prove : (Conclusion)

- (1) $\text{Equal}(\text{sum}(\angle A, \angle B, \angle C), 180)$
 $\text{Equal}(\text{sum}(\angle A, \text{sum}(\angle B, \angle C)), 180)$
- (2) $\text{Equal}(\text{sum}(\angle A, \text{EXT}(\angle A)), 180)$

$$\begin{aligned} (3) \quad & \text{Equal}(x, y), \text{Equal}(z, y) \rightarrow \text{Equal}(x, z) \\ & \sim(\text{Equal}(x, y) \wedge \text{Equal}(z, y)) \vee \text{Equal}(x, z) \\ & \sim \text{Equal}(x, y) \vee \sim \text{Equal}(z, y) \vee \text{Equal}(x, z) \end{aligned}$$

$$\begin{aligned} (4) \quad & \text{Equal}(\text{sum}(x, y), \text{sum}(x, z)) \rightarrow \text{Equal}(y, z) \\ & \sim \text{Equal}(\text{sum}(x, y), \text{sum}(x, z)) \vee \text{Equal}(y, z) \end{aligned}$$

$$\begin{aligned} (5) \quad & \text{Equal}(y, z) \rightarrow \text{Equal}(z, y) \\ & \sim \text{Equal}(y, z) \vee \text{Equal}(z, y) \end{aligned}$$

$$\begin{aligned} (6) \quad & \text{Negation of the conclusion:} \\ & \sim \text{Equal}(\text{EXT}(A), \text{sum}(B, C)) \end{aligned}$$

Resolution Graph

$\sim \text{Equal}(x, y) \vee \sim \text{Equal}(z, y) \vee \text{Equal}(x, z)$ (2)

$\{ \text{sum}(A, \text{ext}(A)) / x, 100 / y \}$ $\text{Equal}(\text{sum}(A, \text{ex}(A)), 100)$

$\sim \text{Equal}(z, 100) \vee \text{Equal}(\text{sum}(A, \text{ext}(A)), z)$

(1) $\text{Equal}(\text{sum}(A, \text{sum}(B, C)), 100)$ $\{ \text{sum}(A, \text{sum}(B, C)) / z \}$

(4) $\text{Equal}(\text{sum}(A, \text{ext}(A)), \text{sum}(A, \text{sum}(B, C)))$

$\sim \text{Equal}(\text{sum}(x, y), \text{sum}(x, z)) \vee \text{Equal}(y, z)$

$\{ A / x, \text{ext}(A) / y, \text{sum}(B, C) / z \}$

(6) $\text{Equal}(\text{ext}(A), \text{sum}(B, C))$

$\sim \text{Equal}(\text{EXT}(A), \text{sum}(B, C))$

$\{ \} \quad \{ \text{contradiction} \}$

Hence, the conclusion is true
